

VKR Rake Screen

Overview

Vulcan brings the simple design of the Model VKR Knuckle-Rake Bar Screen to market for those owners seeking a “budget” screen that can do the job right. But don’t worry, “budget” doesn’t mean flimsy or cheap. Vulcan designed this screen to handle debris found in wastewater, stormwater, and combined sewers of smaller systems with lower flow rates, but with the same challenges seen in higher flow systems. The Model VKR Screen is an automatic, self-cleaning mechanical bar screen customized for existing channels or new construction. Whether at pump stations, intake structures, or wastewater treatment plants, the Vulcan Model VKR Knuckle-Rake Bar Screen provides consistent, low maintenance and economical screenings removal.
